

## Ensure energy performance : Implement a water treatment management program

Your system's water condition can have a major impact on operating costs, energy usage, water useage as well as system life and reliability. A key part to sustaining a High Performance Building is an effective water treatment program.

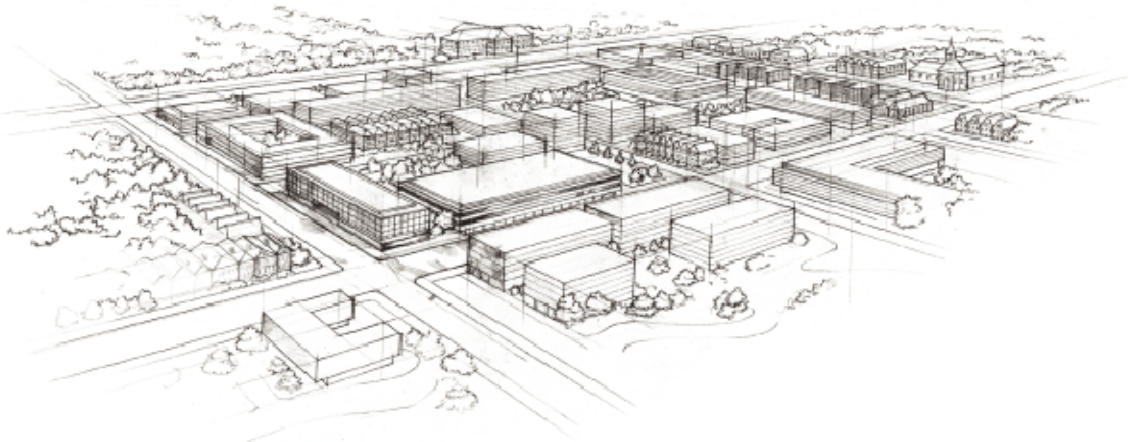

Whether it is your cooling tower, closed loop chilled water system, steam or hot-water boiler, Brady's water treatment experts can help you implement a complete water performance management plan for your facility.

How does Brady's water performance management plan different from traditional water treatment? In reality, the difference lies in the level of service and accountability we can provide to our customers. As North Carolina's leading HVAC provider, we can offer a vast range of knowledge and experence that typical chemical companies can't.

We will provide a thorough system analysis, custom program design and total service package to ensure your water treatment program accomplishes your facility goals on an ongoing basis.

Brady has a staff of water treatment professionals, including dedicated water treatment technicians. In addition, we partner with one of the largest water treatment laboratories and chemical manufactures in the world to provide our customers with an unmatched level of service and expertise.
